Rotaract Club of Xiamen University Malaysia | Rotary Club of Kuala Lumpur Dynamics | Rotary Club of Tun Razak Exchange

SDC Hackathon

Technical Tools Declaration

Hosted by Xiamen University Malaysia (XMUM) AI Club

Submission Deadline: 25 October 2026

Instructions: Declare every API, cloud service, AI tool, dataset, model, and sponsor resource your team used to build the project. Complete every section; where a category does not apply, tick "No" or write "None" – do not leave it blank. Submit as a single PDF document named "SDC2026_TeamName_TechDeclaration.pdf" together with your project submission. Undeclared third-party resources discovered at judging may affect your score or eligibility.

SDC HACKATHON 2026

Technical & Tools Declaration

Hosted by Xiamen University Malaysia (XMUM) AI Club

Submission Deadline: [Insert date]

Instructions: Declare every API, cloud service, AI tool, dataset, model, and sponsor resource your team used to build the project. Complete every section; where a category does not apply, tick "No" or write "None" – do not leave it blank. Submit as a single PDF document named "SDC2026_TeamName_TechDeclaration.pdf" together with your project submission. Undeclared third-party resources discovered at judging may affect your score or eligibility.

1. Team & Project Overview

Team Name	Asia Pacific Square Mall II
Project / Solution Name	eViral
Name (Leader)	Chin Hui Yan
Email & Phone (Leader)	chinhuiyan22@gmail.com +60162098926
University Affiliation(s)	Sunway University Asia Pacific University of Technology & Innovation (APU)
Live Prototype URL	https://e-viral.replit.app/
Code Repository URL (public / access granted to judges)	https://github.com/applejuice8/eViral.git

2. Architecture & Technology Stack

2.1 System Architecture Overview

Describe how the components declared in this document connect end-to-end (e.g., user interface → backend → AI model/API → database → cloud hosting). Attach a system block diagram as an appendix if available.

[Maximum 200 words]

The Next.js frontend talks to the FastAPI backend.

OpenRouter -> YouCam -> OpenRouter

The product photo is sent to OpenRouter (to understand what it is), then to YouCam (to enhance the image) for each campaign stage, then again to OpenRouter for captions. All other data is stored inside Postgres throug SQLAlchemy.

The scheduler (APScheduler) polls every 30 seconds and posts anything thats due. Everything is dockerised.

2.2 Languages, Frameworks & Libraries

List the main programming languages, frameworks, and third-party libraries that your team did not create. Open-source use is permitted provided it is declared and properly licensed/attributed.

Name & Version	Purpose in Project	License
Python 3.13 + FastAPI 0.16.1	Backend	PSF
TypeScript 5.9.3 + Next.js 16 + React 19	Frontend	MIT
TailwindCSS 4	Styling	MIT
SQLAlchemy 2.1 + Alembic	ORM & migrations	MIT
OpenAI Python SDK 3.37	Client for OpenRouter	Apache-2.0
httpx	HTTP client for YouCam API	BSD-3

Name & Version	Purpose in Project	License
APScheduler	Scheduling auto-posting	MIT

3. APIs & Cloud Services

3.1 External APIs

List every external API your solution calls (GenAI, maps, payments, messaging, data feeds, etc.). Do not include API keys or secrets in this document.

API & Provider	Purpose in Project	Access Tier (free / paid / sponsor-provided)
OpenRouter	Analyzes uploaded product photos and generates campaign captions using language and vision models. The app uses free models by default, with model fallbacks that may be paid.	Free models by default; costs depend on model and usage.
Perfect Corp YouCam API	Optionally enhances product images and generates campaign-stage images.	Paid or credit-based; called only

3.2 Cloud Platforms & Deployment

List every cloud service used for hosting, storage, databases, authentication, or compute, and indicate how the prototype is deployed.

Service & Provider	Purpose in Project	Plan / Region
Replit	Hosting Backend Server	Asia

4. AI Tools, Models & Datasets

4.1 AI Models Used in the Solution

List every AI model embedded in or called by your application, including pre-trained, fine-tuned, and self-trained models.

Model & Version	Source / Provider	Usage (pre-trained / fine-tuned / self-trained)	License / Terms
nvidia/nemotron-3.5-super-vl:free	NVIDIA via OpenRouter	Pre-trained (main vision + text model)	NVIDIA Open Model License; OpenRouter ToS
google/gemma-4-31b-it:free	Google via OpenRouter	Pre-trained (fallback)	Gemma Terms of Use; OpenRouter ToS
qwen/qwen3.7-flash	Alibaba Qwen via OpenRouter	Pre-trained (last, paid fallback)	Qwen / Alibaba Cloud terms; OpenRouter ToS
youcam-image-v2	Perfect Corp	Pre-trained (stage posters)	Perfect Corp YouCam API Terms
YouCam AI Photo Enhance	Perfect Corp	Pre-trained (photo enhancement)	Perfect Corp YouCam API Terms

4.2 Datasets

List all datasets used for training, fine-tuning, evaluation, or in the running application. State clearly if a dataset contains personal or sensitive data.

Dataset Name	Source / URL	Type (public / private / self-collected / synthetic)	License	Personal Data? (Y/N)
-				

Dataset Name	Source / URL	Type (public / private / self-collected / synthetic)	License	Personal Data? (Y/N)

4.3 AI-Assisted Development Tools

Tools used to help write code, design, content, or documentation (e.g., chat assistants, code completion tools, image generators). Declaring these tools does not reduce your score; undeclared use may.

Did your team use any generative-AI tool to help create code, design, text, or other project material?

☑ Yes ☐ No

If yes, list them below:

Tool & Version	**Used For**	**Extent of Use (minor / moderate / major)**
GitHub Copilot	- Mostly boilerplate + docstrings + quick bug fixes - Pushing and merging PRs. Main has push protection, so we wrote a skill to push the commit, create the PR, then merge it into main.	Minor
Codex (GPT-6-Luna)	- ReadMe generation based on template to ensure we didn't miss out on anything.	Minor

Briefly describe how your team reviewed, tested, and took responsibility for AI-generated output:

[Maximum 100 words]

Our team review the AI-generated content to ensure the accuracy and relevance of it. We test the results repeatedly, verify and compare the AI-generated key information reliable sources. We also refined the AI-generated content and ensure all the outcomes were approved by the team.

5. Sponsor-Provided Resources

Declare any official SDC sponsor-provided GenAI API, cloud credits, tools, mentoring, or data that your team used.

Did your project use any official SDC sponsor-provided resource?

☑ Yes ☐ No

If yes, list them below:

Sponsor	**Resource (API / credits / platform / data)**	**How It Was Used in the Project**
Replit	Platform	- Initial ideathon and wireframing of the project. Quick iteration and prototyping. - Hosting backend

Was the sponsor resource essential to the core functionality of the prototype, or could it be replaced? Explain briefly:

[Maximum 100 words]

Replit was essential to our project, serving as a platform for us not only to toy around with the idea, and building a quick and dirty prototype before committing any real time, but also as a hosting service for our backend once it was actually built. Certain parts of Replit could be replaced separately, but as a complete one-stop shop, we'd stick with Replit.

6. Security, Privacy & Responsible Use

6.1 Data Handling & Privacy

What user or personal data does your application collect, store, or send to third-party services (including AI APIs)? How is it protected, and how long is it kept? State "No user data is collected" if applicable.

[Maximum 150 words]

eViral stores business details (name, type, tone), product name, photos, prices, plus campaign settings and generated captions. Photos and text are sent to OpenRouter (for understanding the photo and writing captions) and YouCam (for image editing). Images on YouCam deletes all images after 24 hours.

API keys are kept in env variables only. Publishing posts are mocked, so it doesn't go out to real social media platforms.

6.2 Known Limitations & Risks

Identify the main technical limitations of your AI components (e.g., hallucination, bias, rate limits, dependency on a single provider) and any mitigation you have implemented.

[Maximum 150 words]

The vision model is not perfect, and can misread a photo. This is why the owner's confirmation is still needed.

Free AI models on OpenRouter can be slow or rate-limited, so we fall back to a few models automatically (some of which are paid). If YouCam fails, it falls back to the original photo without enhancement.

7. Compliance & Readiness Checklist

Tick all boxes that apply before submitting.

- ☑ All APIs, cloud services, AI tools, models, and datasets used in the project are declared in this document.
- ☑ All third-party code, datasets, and models are used in accordance with their licenses, and attribution is provided where required.
- ☑ No API keys, passwords, or other credentials are exposed in the code repository, prototype, or this document.
- ☑ Any use of generative-AI tools for development has been disclosed and reviewed by the team.
- ☑ Any use of official SDC sponsor resources has been declared in Section 5.
- ☑ The prototype described here is accessible to judges through the links provided in Section 1.
- ☑ All fields in this template have been completed within the word limits stated.

8. Declaration

By submitting this document, the team leader confirms that the information provided is complete and accurate to the best of the team's knowledge, and that every API, cloud service, AI tool, dataset, model, and sponsor resource used in the project has been declared.

[CHIN HUI YAN]
